### **Project Description**

- The client is dealing with Financial Services in European Market
- I am currently working as Application Development Analyst in Retail and Corporate Payments Area with various Lines of Businesses.
- The objective of project is versatile. From requirement gathering to unit testing through various software development life cycle. This project mainly ensures the integrity of Retail and Corporate Payments (i.e., E-invoice, Loans, Payment Storage, Foreign Cheques, Guarantor, Payment redirection etc) system functionally as well as technically as per Business rule.
- Adhoc **internal projects/CR's** to fix current production bugs and to enhance performance , **Handling Production Issues ( inclusively L2 and L3 activities)** to work with, **monitoring of production batch resolution** of any issues within timelines , **adhoc daily taskssuch** as Database updates,handling user queries,reporting requests from the client for managing statistics as and when required.

### **Roles & Responsibilities:**

- Understanding the business requirement for any of the above tasks mentioned and performing them efficiently with review. Creating pre-DTD, DTD, UTP, UTR, and various logs through SDLC.
- Started the convention of knowledge sharing by preparing Knowledge capsule documents and sharing with team so that team is up to date.
- Also handling process-oriented activity of the Retail group, conducted Weekly Status Report sessions. Created Effort Tracking System, SLA miss sheet, SNOW tag sheet.
- Actively participated in any production/PA/batch failure, reporting issues and provided temporary and permanent resolution to them for all team members.
- Provided innovative ideas to other team Lead/ONC/PL to improve stability in OP project.

## **2. Health Care Sector**

**Role** : Associate Software  
**Client** : Health Care  
**Skill set used** : COBOL , JCL , DB2  
**Tool** : HP Service Manager, FILE-AID, File Manager, Tracemaster.  
**Operating System** : OS/390  
**Duration** : March 2016 – February 2017  
**Team Size** : 5

### **Project Description**

- This Project is in Health care sector dealing with Insurances and profit subsidiaries.
- The client is one of the biggest health and public insurance companies in the US.
- The objective of project is versatile. Working, processing, rectifying and correcting the claims for the customers.

### **Roles & Responsibilities:**

- Involved in coding, analysis, peer reviews for the assigned modules, defect/data fixing raised from Customer.
- Rectify the data issues in the application by executing SQL's using SPUFI for DB2 tables. Intercommunicated with various teams in Highmark for resolving the tickets and gaining knowledge on the same.
- Worked as Application developer & Production Support for Highmark-Provider Product Maintenance Project.

- Preparation and review of DTD, Unit test plan and Unit Test result.
- Impact analysis and identification of components affected.
- Coding of new programs, JCL, control cards and modification of affected Online and Batch programs.
- Involved in Test cases preparation and execution for unit and Integration testing.
- Worked on Blue Devel Components, Tracing to figure out the flow of programming components and used BLUX JCL to check the functionality of Blue Devel components.
- **Adhoc daily tasks** like creating adhoc programs, jobs to be created for various adhoc scenarios for which there is no existing process or sometime to automate existing manual process reducing chances of manual errors and improved productivity.
- Document the incidents raised in HP Service Manager for understanding.

### **Achievements**
